

My husband and I drive over the road as a team operation leased to a local company. Our XM Radio with all it's choices is a life saver. Being on the road 24/7 for two to four weeks at a time can get tiring, and the Xm satelite radio helps keep us alert. We go from one coast to the other, thru many large cities and with bad weather or construction or any other emergencies we may come in contact with , the xm satelite radio gives a much better account of weather or road closings or accidents than any local channel. We pay for this service and feal it is not only detrimental to our safety to know what to expect whether it be bad weather, an accident or road closing/construction but to the general public. We have cell phones,computors,gps systems etc.and all for the betterment of the traveling \,working public. We are tired of being told what we can and cannot do,see or hear. We want our first amendment rights protected, not taken away by some group who thinks taking away our rights is their right. Every where we turn someone doesn't like something,they try to take away our rights to give themselves dictatorship over our rights. It's time to stop them whomever and wherever they might be. Xm satilie is a right we pay for. Let the NAB learn how to get a bigger share of the audience by working at it with better programing and giving the public what it wants. The public wants XM SATLITE RADIO just the way it is. Informative and entertaining. Thank You

Everett and Sharon Ruckman
